10 Things To Do To Manage Resistant Kochia

(Burlington, Colo.)

1. Use tank mixes. Efficacy on kochia will increase.
2. Use full labeled herbicide rates.
3. Apply post-emergent tank mixes to kochia before the weed is 6 inches tall.
4. Actively growing kochia is easier to control than weeds that are under moisture stress.
5. Apply herbicides with 3 to 10 gallons per acre water.
6. Use recommended additives and adjuvants.
7. Flat fan nozzles are recommended. Other types can work effectively also.
8. Re-apply herbicides as later kochia flushes emerge.
9. Rotate crops along with herbicides.
10. Follow all manufacturer recommendations to enhance coverage and minimize drift risk.

###

Colorado State University Extension programs are available to all without discrimination.

Colorado State University Extension is your local university community connection for research-based information about natural resource management; living well through raising kids, eating right and spending smart; gardening and commercial horticulture; the latest agricultural production technologies and community development. Extension 4-H and youth development programs reach more than 90,000 young people annually, over half in urban communities.
